Frameworks/Tools

Django/Flask/FastAPI

Very Good

Vue & React

Very Good

Senior Software Engineer with 7+ years of professional experience, specializing in developing and architecting robust systems and applications. Passion lies in tackling the unknown, consistently leveraging challenges to acquire extensive knowledge and drive continuous improvement.

Work History

2023-08 - Current

Senior Software Engineer

Aledade, Bethesda, MD

- Built **DBT + Snowflake data models** for Aledade's *IPO Readiness* project, including **patient attribution models** that saved the analytics team **hundreds of hours** of manual work.
- Built an internal **Git-based deprecation scanner** using **Python** with **Airflow orchestration** during a large-scale model migration. The scanner performs weekly repo scans to detect assets marked for deprecation, outputs CSVs consumed by **DBT models**, and surfaces utilization metrics in **Snowflake dashboards**. It also integrates with PRs to automatically warn developers when referencing deprecated assets.
- Developed a **Snowflake cost-tracking dashboard** that provided visibility into compute and storage usage. Identified a critical bug preventing deletion of production database snapshots, saving the company **over $100K** in wasted storage costs.
- Designed and implemented a **Snowflake-to-Postgres sync pipeline** using Kafka and Postgres sinks. Built an alerting system to detect **record misalignments** between Snowflake and Postgres, and created a **tombstone script** to correctly handle deletes and restore synchronization.
- Architected and deployed a solution leveraging **Snowflake streams with Kafka** to generate real-time patient events for the Patient Domain team, enabling timely identification of patients who needed outreach from their primary care providers.

2022-03 -

Full Stack Software Engineer

Docker

Very Good

CI/CD, GitLab/GitHub

Very Good

Snowflake

Very Good

Apache Kafka

Very Good

Postgres

Skills

Python

JavaScript/TypeScript

Lua

SQL

2023-08

CreatorIQ, Los Angeles, CA

- Full control and responsibility of features and cycle projects using JavaScript/Vue.js and Python/Django
- Architected and implemented an AWS Lambda/Gateway API using Python and Flask for the Gifting and Seeding project.
- Enabled clients to utilize the API to send gifts to creators and efficiently track engagement, enhancing the overall functionality of the system.
- Led building the client interface using React and collaborated with PMs and Designers for the Gifting and Seeding project

2021-07 - 2022-03

Software Engineer II

Point3 Federal, Baltimore, MD

- Managed client communication and strategic planning for Government project at Point3 Federal, ensuring seamless collaboration and understanding of client needs.
- Orchestrated the deployment of applications and performed essential DevOps operations, optimizing the efficiency and reliability of the systems.
- Developed a Python-based video uploading tool integrated with Minio, enhancing the value of cybersecurity lessons by providing a targeted and effective platform for content delivery.

2020-10 - 2021-07

Software Engineer

Point3 Federal, Baltimore, MD

- Consistently met project deadlines by effectively managing time and prioritizing tasks according to importance.
- Developed scalable and maintainable code, ensuring long-term stability of the software.
- Refactored legacy codebase for improved maintainability, paving the way for easier future updates.

2017-09 - 2020-01

Front End Developer

Fuegoleon Development, Austin, TX

- Independently developed React static sites tailored for small businesses, showcasing a commitment to

delivering personalized and effective web solutions.

- Managed end-to-end communication and hosting activities using Netlify, ensuring a seamless experience for clients throughout the project lifecycle.
- Adapted to diverse business needs by incorporating Vue.js and WordPress into the development stack, showcasing flexibility and a client-centric approach in frontend development.

Education

Certificate: Software Engineering

Springboard Bootcamp - San Francisco

2017-01

Master of Science: Finance

Durham University - United Kingdom

Bachelor of Arts: Accounting

Lipscomb University - Nashville, TN

Projects

Python Steam Wrapper (50 Stars)
Open-source python Client wrapper for Steam API

TechPath
Full Stack application that tells you where you are in your tech career based on tools and experience you have WIP. Frontend and Backend GitHub.

LLUV
Lapis Lua Vue Full Stack application with Docker. This will be an open-source project to showcase lapis, a Lua backend framework. 4chan like image board

Comments.io
Comments as infrastructure. Built a full fledge API for implementing comments to an application. Also has an SDK widget
